Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Response to Amendment

1. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 6-10, 12, 14 and 15 are rejected under 35 U.S.C. 102(b) as being anticipated by Mouissie (EP 0 415 489).

Mouissie (Figure 3) show a system for connecting a male member 1 to a female member 4 with both members displaceable along an axis lying in a plane, the male member having a pair of first projections 3 each with one end fixed to the male member and the other end resiliently movable relative to the male member and having a protrusion 9 at its tapered tip, and the female member having a pair of C-shaped grooves (not numbered) with cavities wherein the grooves are parallel to the axis, protrusions engage the cavities for latching the two members together. The two members, when fitted together, have a common axis and centered about this common axis. The resiliency of the projections would absorb vibration.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2-5, 11 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mouissie in view of Manning et al.

Mouissie shows all the features of these claims as described in Paragraph 3 above except second projections on the male member with faces engaging corresponding faces of the groove in the female member. Manning (Figures 1-7) shows a male member 24 having a housing 22 with a resilient first projection 96 which engages an aperture in a C-shaped groove 90 of a female member 26 and another projection 84 with faces engaging corresponding faces of groove 90 in the female member. It would have been obvious to one having ordinary skill in the art at the time of the instant invention to provide second projections on the Mouissie male member as shown by Manning because this would provide an alignment means and prevent relative movement of the members in directions transverse to the mating direction as shown by Manning.

Response to Arguments

6. Applicant's arguments with respect to claims have been considered but are not persuasive. Since Mouissie shows all the structural features, the functions such as centering of the two members and absorption of vibration due to resiliency of the projections are inherent.

Conclusion

7. The **THIS ACTION IS MADE FINAL**. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
